### Introduction:

Did you know that the ZM110 had a built in Animal Weighing function as standard.

This function allows the scale to hold an accurate weight reading even with the animal moving around, giving the customer a readable and accurate weight.

### Example Applications:

- **Weight of Animals for sale**

When the farmer is paid by the Kg or Lb, getting an accurate weight can be the difference between making a profit or not, a small error in the weight can build to a large loss in profit over multiple weighings.

- **Farmers / Vets (Medicine Dosing)**

With most medicine doses given per Kg or Lb it is very important to know the animals correct weight as it can be the difference between life and death for the animal.

- **Farmers / Vets (Animal Feeding)**

Knowing the weight of the animal will allow the farmer to judge if they are feeding the animal the correct amount of food. Farmers aim to feed the animal the minimal amount of feed, whilst allowing the animal to grow to the size and weight required, and therefore maximizing their profits.
